Lagos, Nigeria | [ebubeuzor17@gmail.com](mailto:ebubeuzor17@gmail.com) | <https://github.com/Ebubeuzor>

**My Portfolio Website** | <https://ebubeuzor.github.io/ebubeportfolio/>

## EXPERIENCE & Skills

---

Skill	Years Of Experience
Database and cache	3 years
Knowledge of servers	3 years
REST API	3 years
GIT	3 years
MYSQL	3 ye ars
Laravel	2 years
PHP	2 years
NPM	2 years
JavaScripr	2 years

### Additional Skills:

Jquery | 2 years,      MVC | 2 years,      OOP | 2 years,      HTML & CSS | 3 years,  
Bootstrap | 2 years ,      Visual Studio | 3 years.

## PROJECTS

---

### Back-End Project | CMS Project

Laravel | JavaScript| Bootstrap | HTML | CSS

When building this project I used NPM to build my authentication mechanism and view so that my work can be easier I then made sure my application was fully secure by making sure every request coming into my server had a csrf token and I broke down my view files into smaller pieces so that my application can be super fast, then I handled all the relationships very well so that only the admin has complete control every action that comes into my application.

## Back-End Project | Ebube Phone Store

Backend design for a single e-commerce website

Javascript | JQuery | Ajax | PHP

I had some challenges while building this project because it was the first time I ever used classes with php. I've had some experiences working with classes from other programming languages such as Java, Python and JavaScript and because of my love for Java Programming Language it was easy for me to get a good understanding of classes in php. But I have to say it was not easy building an ecommerce application simply because of my love for coding I had to learn a lot of things first like ajax in php and how to work with json etc put it all together to build my ecommerce app.

## Front-End Project | GadgetPride Ecommerce Website

Frontend design for a complete e-commerce website

JavaScript | HTML | CSS

As a front-end developer I have to admit one of my favourite things to do is to consume APIs, I have always loved it that as soon as I learnt how to consume with ajax, fetch and then and finally the latest Async await I told myself I must create a large project and because I started with frontend development and had no experience with any backend programming language I decided to create a json file that I would use to add products to my website and also add the add to cart feature to the website this was by far the most difficult part of the project but with my never give up attitude and my positive mindset I completed the project.

## Front-End Project | Music Player

Frontend design for a music player

JavaScript | HTML | CSS

I have always been a music lover so I said why not just build a music player with good old Javascript I must confess it wasn't really challenging I just had fun doing this.

## Back-End Api Project (COLLABORATION) | Password Valut

PHP | JavaScript | HTML | CSS

I did this with a front-end developer but I wanted to try something different so I was like why not do something different from what I am accustomed to so I created an api with php and the front-end developer consumed the api and designed everything on the page I really enjoy working with people and this gave me the opportunity to do so and also build an api.

## Back-End Software Engineer | Password Valut

JavaScript | PHP

An application where you can generate and store password easily  
I created this after I became very comfortable with PHP so it was quite easy I created a form stored users credentials and then gave them the ability to store their social media details so that they don't have to memorize their details for their socials account.

**You can view all my project in my github account.**

## EDUCATION

---

University of NIIT- Software Engineer

2023
